Distribution	Embargoed until Corporate Communications release

About Solace Telecom

Solace Telecom is a regional internet and telecommunications provider delivering fibre broadband, mobile connectivity, and managed enterprise network services. Headquartered in the coastal city of Meridian Bay, the company has spent over two decades building infrastructure that keeps homes, small businesses, and public institutions connected across its service territory.

Founded in 2003 as a small regional dial-up provider, Solace Telecom has grown into a full-service operator supporting residential fibre-to-the-home (FTTH), 4G/5G mobile coverage, and dedicated enterprise links for logistics, healthcare, and public-sector clients. The company operates its own regional data centre and network operations centre (NOC), and maintains a 24/7 customer support and field-technician network across its coverage area.

Solace Telecom's mission is simple: reliable connectivity should not be a luxury. The company continues to invest in last-mile fibre expansion into underserved rural communities, alongside ongoing modernisation of its billing, customer support, and network monitoring platforms.
